

BS Partners Company operates on the local market and abroad for several years. We owe our vigorous development to the recognition of customers, time deliveries and consequence in operation. We are flexible and follow the principle of close collaboration with the client.

Our company specializes in manufacturing of metal or plastic elements and constructions. Furthermore, we have been developing and manufacturing of special tools and support tools for workshops. Basic technologies used by us in manufacturing processes are as follows: cutting, bending, laser cutting, water cutting, turning, welding, machining and various types of surface treatment. In addition, we specializes in the assembling of realized projects, prefabricated structures and metal components on the client site.

We provide services based on the technical documentation supplied by the customer, as well as developed by our company on the basis of customer's pattern or provided information.

We supply consulting and engineering technology in the scope of metalworking, machining parameters and heat treatment.

BS Partners Company is prepared to create comprehensive technology solutions.
